Professional Summary

- AI-focused full-stack engineer (B.Tech Computer Engineering, 9.06 CGPA) with remote AI Engineer internship experience at Dehix, targeting AI/LLM Engineer and Full-Stack Software Engineer roles.
- Built InferMesh, a multi-provider LLM gateway (OpenAI, Anthropic, Gemini, Azure) backed by 248+ automated tests, and ContextOS, a browser extension that carries context across ChatGPT, Claude, Gemini, and DeepSeek.
- Shipped live web projects, including a salon booking website with a custom PHP admin CMS and an e-commerce site with 25+ REST APIs and an AI chatbot.
- Skilled in LLM integration, workflow automation, React, Node.js, FastAPI, PostgreSQL, Docker, and Azure.

Experience

AI Engineer Intern — Dehix

Mar 2026 – Aug 2026 · 6 mos

Internship · Noida, India · Remote

- Supported development of AI and machine learning solutions as a remote intern on the Dehix engineering team.
- Collected, cleaned, and preprocessed datasets, then trained models for AI-driven product features.
- Built LLM-powered features and connected them to backend APIs and frontend interfaces alongside the web team.
- Evaluated and tuned model outputs to improve accuracy and performance.
- Researched emerging AI tools and techniques, and applied the relevant ones to ongoing work.
- Maintained clean code, documentation, and Git version control throughout the internship.

Technical Skills

Languages: Advanced Python, Java, TypeScript, C, C++

Web Technologies: HTML5, CSS3, JavaScript, React, FastAPI, Node.js, Express.js

Databases: MySQL, MongoDB, SQLite

Data Science: Data Analysis, Data Visualization, Machine Learning Basics, LLM Fine-tuning

Android: Android Studio (Java)

DevOps & Cloud: Git, GitHub, Docker, Microsoft Azure, n8n (Automation)

Projects

InferMesh - Multi-Provider LLM Gateway & Observability Platform | GitHub

Python 3.13, FastAPI, async SQLAlchemy, PostgreSQL, pgvector, Redis, React 19, TypeScript, Docker, GitHub Actions CI

- Built a production-shaped multi-provider LLM gateway unifying OpenAI, Anthropic, Gemini, and Azure AI Foundry behind one OpenAI-compatible API, with per-provider retry/backoff, cross-provider fallback, and circuit breaking to shed load from failing upstreams.
- Implemented two-tier response caching — exact-match plus semantic caching via pgvector cosine similarity — and Redis sliding-window rate limiting, cutting duplicate provider spend and returning cached hits in single-digit milliseconds.
- Developed a 15-page React 19 / TypeScript observability dashboard (Vite, Tailwind, TanStack Query, Recharts) driven entirely by SQL aggregation over gateway telemetry, covering latency percentiles, cost analytics, provider health, and cache/rate-limit metrics.
- Backed the system with 248+ automated tests (pytest, Vitest, Playwright E2E), strict mypy/ruff gates, 4-job GitHub Actions CI, and multi-stage Docker packaging — achieving WCAG 2 AA compliance with zero axe-core violations.

ContextOS - AI Context-Persistence Browser Extension | ContextOS | GitHub

React, Vite, Tailwind CSS, Framer Motion, Chrome Extension APIs (Manifest V3), JavaScript (ES6+), LLM APIs (OpenAI, Anthropic, Gemini, Azure), Client-side Vector Search, Node.js

- Engineered a context-persistence browser extension that bridges session states across ChatGPT, Claude, Gemini, and DeepSeek, reducing prompt fatigue and repetitive setup for developers.
- Architected a client-side vector search and retrieval system running entirely in-browser, calculating cosine similarity to surface relevant historical context without external databases.
- Developed a secure, multi-provider credentials engine supporting 8+ LLM APIs (OpenAI, Anthropic, local Ollama models) with strict client-side-only storage for user privacy.

MJ The Family Salon - Full-Stack Salon Website & Booking CMS | mjthefamilysalon.shop

HTML5, CSS3, Bootstrap 5, Vanilla JavaScript, GSAP + ScrollTrigger, Swiper, GLightbox, PHP 8.1+, MySQL/MariaDB (PDO), SortableJS, cPanel Hosting

- Built a salon website where customers can view services, gallery, team, reviews, working hours, and location, and book appointments online.
- Booking and contact form submissions are saved in the database and sent to the salon owner by email.
- Created an admin panel to manage bookings, services, gallery, reviews, team, working hours, social links, contact details, locations, messages, and website settings.
- Added drag-to-reorder for content, image upload with automatic resizing, and a secure admin login.
- Added SEO settings (page title, description, social sharing cards, sitemap) and deployed the site live on a custom domain with HTTPS.

Home Decor Furniture - E-commerce Website | GitHub

Node.js, Express, MongoDB, JavaScript, HTML5/CSS3, Gemini AI API, REST APIs, n8n Web-hooks

- Developed a full-stack e-commerce system with MongoDB, authentication, admin dashboard, and 25+ REST APIs.
- Built an AI-powered Gemini chatbot with intelligent product search and caching, cutting API usage by 85%.
- Automated invoices and order workflows using n8n webhook integration.

Education

B.Tech in Computer Engineering

Indus Institute of Technology, Ahmedabad

2022 – 2026

CGPA: **9.06 / 10.0**
